Zoology 1: Flying Creatures Of The Fifth Day -- Young Explorers Series (Young Explorer (Apologia Educational Ministries))

Synopsis

Children begin exploring the dynamics of flight and animal classification, learning why the design we see in these incredible creatures points us to our Creator God. Your kids will learn how to attract various bird species to your yard and identify them by looking at their special physical characteristics, nests, and domestic practices. Students will also explore the world of bats, while exposing the misconceptions that most people have regarding these docile creatures of the night. They will then learn to scientifically classify insects with a simple glance at wings and other physical characteristics. In addition to designing experiments with flies, crickets, darkling moths, and caterpillars, kids will also learn how to attract and catch insects for scientific study. Your children will become true scientists, observing nature and the fascinating world God created.

Book Information

Series: Young Explorer (Apologia Educational Ministries)

Hardcover: 236 pages

Publisher: Apologia Educational Ministries (March 16, 2012)

Language: English

ISBN-10: 1932012613

Customer Reviews

This is a great science curriculum! We have learned a lot and really enjoyed using it. You will find yourself observing birds everywhere or looking for insects in a new light. --Fortunately For You Books
There is more activity and variety in these courses than in traditional textbooks. The format makes it easy for parents to provide an excellent balance of information and activity that should be very effective for science instruction in the elementary grades. --Cathy Duffy Reviews
This is an excellent college-preparatory course for high school . . . The microscopic slides are wonderful quality, and are a great teaching tool with the course. The dissections are fun, easy, and interesting. The textbook reads easily. The author has a wonderful writing style that keeps the student

interested. --Curriculum Choice

Jeannie Fulbright is a mother of four who shares with her readers a love for God's Word, family, homeschooling, and science. She began speaking and writing in college as a sportscaster for the University of Texas and as a headline writer with the Daily Texan. Soon after her family set out on their homeschool journey, Jeannie recognized an immense need for scientifically sound creation-based curriculum that would be both engaging for kids and easy for parents to use. Her background in science at the University of Texas inspired her to create the Apologia elementary science courses.

I love this book! I think most of my love for it is that I bought it along with the Audio cd-rom (provided in separate listing) and the two make the perfect combinations. This book has beautiful brightly-colored pictures. The text has a very friendly layout and the text is so unlike a textbook. The way the information is presented makes the information come alive. My son LOVES this book and looks forward to reading (and listening) to it. I love that this book emphasizes the mystery of faith with the truth of science in a very non-threatening non-creationist way. The mystery is laid out in such a way that it prompts wonderful discussion with my child about how it's just fine to not know all the answers and to enjoy the facts that we know for sure. Thank you, Jeannie Fulbright, for such a fantastic and well-written book. I will be buying the books in the rest of this series because of how terrific this book is.

Apologia science is by far the best curriculum for homeschool families! It can appeal to younger and older students. I love how this curriculum actually is based on the Bible and Biblical truths. No evolution and the info is deep enough but not over small children's head. Keeps their interest with the amazing pictures and content, but is not hard to teach or explain. My children have truly enjoyed science and love doing the jr. Journals along with them. I gave tried other curriculum, but nothing compares.

I don't know how they do it but here is another book in this series that manages to illicit wonder even in adults who thought they knew about the topic! Wonderful conversational style, great project ideas that are natural not so schoolish that they are unrealistic or tedious for families. A treasure that my kids enjoy reading for fun with me-and so worth the text book price! LOVE this series!!!!!!

My daughter and I love this book. i didn't want to teach her about evolution, but I also didn't want to use something overly preachy. Mathis is the perfect balance. I do not agree with the authors view on dinosaurs, but that is only a small part of the book. I will definitely be using others in the exploring creation series for school.

Excellent series! Apologia is my favorite company when it comes to science textbooks, by far!! A good book for any age! The subject is handled really expertly! The books a very interesting and well written. I am learning all kinds of new information with my kids!

I am so happy I found the Exploring Creation series. The textbooks and journals are all someone need to engage kids in science. The pages are colorful and the books are are of good quality. I can't wait for us to be able to use it with my daughter in home schooling.

Decided to buy a used copy to save money. This was in very good condition, just as the seller said. The only thing I didn't realize is that that this was an older printing so some of the words were slightly different than the newest printing. However the differences were very minor and won't affect the compatibility with the corresponding notebooks (the page numbers are the same in this printing and the newest one).

Thanks.
