For over 35 years, School Zone has been an innovator in children's educational products. School Zone creates a wide range of educational resources to support every curriculum.

I have all of the School Zone math workbooks from Grade K through 6th, including the Fractions and Math Puzzles. For any child who needs brushing up on math, particularly during the summer, or extra help understanding a concept that was taught too quickly in a classroom, these books are easy to understand. As a homeschooling mom of a very "visual" learner, the color pages and fun examples make math less of a chore, and the workbooks can stand alone, unlike some workbooks where they are meant to be a worksheet to accompany a lesson from a textbook or other. These workbooks can be given to a child to do on their own, as the instructions are at the top of each page and an example. I have also found, while grading the work, that the answer key is predominantly correct. I have only found a few instances where the answer key is wrong, and it was only one answer or an entire row of answers was missing. Obviously, at this level, I am able to determine the

correct answer myself.

Okay, I prefer these books as the "Deluxe Edition" (An I Know It ! Combo Book) for about \$3, if you can find them. I gave this book 3 stars since I had previously purchased the Deluxe Edition at WalMart, and I ordered this for our younger son thinking it was the same book. Unfortunatley, this book has 30 pages of exercise where the Deluxe Edition has 59 pages. The "Deluxe Edition" allows 2x the exercies to help reinforce the math concepts. Here is a link to a Deluxe Edition version for a Grade 3 Math Basic book -Â Math Basics 3 (An I Know It ! Combo Book)Â Unfortunately, doesn't have the Deluxe Edition of this Grade 4 Math Basic book at this time.I find these books to be good for reinforcement of the grade level material. Kids can easily finish this 30 page book in a week, and the 59 page version in a couple weeks. They aren't something you want to consider as a primary book for home schooling, or teaching the concepts, but they do make a good review exercise book. These books can be great for summer time to keep the concepts going even if they just do one page per day. For more extensive practice exercises, there are better books available on , but none are cheaper than this one. One series we like are the Kumon workbooks (\$8/each):Word Problems Grade 4Grade 4 Division (Kumon Math Workbooks)Grade 4 MultiplicationGrade 4 Decimals & Fractions (Kumon Math Workbooks)Geometry & Measurement Grade 4 (Kumon Math Workbooks)Some other good books that sells which target specific math topics and give you lots of practice exercises are produced by Chris McMullen. Do a search in to find his books.If you are looking for just a supplemental taste of a few math exercises with a really low cost, then this Math Basic books will fit the bill (no pun intended). Also, there are some on-line math worksheet sites that allow printouts at no cost - look for Math Drills.

These books arrived on time and I am pleased with the practice work.

I appreciate a math workbook that is straightforward and not too gimmicky. This was great for keeping the summer slump away for my 10 year old!

We have loved all of the School Zone math books. However, while this one was also useful, it was definitely the only one so far that was missing some key explanations, in particular, about figuring out equivalent fractions. It seems as if some crucial steps were skipped. I had to search for clear ways to explain these concepts to my son in the Grade 5/6 Fractions book in order to go back and complete the Grade 4 book. There were some other incomplete areas too...this was the first time

that I felt some disappointment with any School Zone books. We are now into Grad 5 Math Basics and gaining so much from it. Thank you, School Zone!

Good supplement for extra practice. The pictures and colors make it cheery.

Overall good math book but the amount of content was very limited.

Was perfect for summer studying.
