Rocky Mountain Nature Guide

LINDA KERSHAW is the best-selling author of a number of nature books published by Lone Pine. She is a career botanist who has consulted and done research for Environment Canada, the World Wildlife Fund, the Alberta Forest Service, the Canadian Forest Service and the University of Alberta. Her extensive field work has taken her into the vast Canadian boreal forest as well as above the treeline in the Rocky Mountains, on Ellesmere Island and in New Zealand. Linda now works as a writer and editor when not pursuing two of her favourite pastimes--photography and illustration. ANDY BEZENER is a biologist and the author of nine nature guides for Lone Pine Publishing.

We bought this field guide as we were preparing for our yearly trip out to Colorado. This book is beautiful and well made, you wouldn't be afraid of the book getting some wear and tear or even in rain. It was perfect for our whole family and my boys who can't read yet (3 & 5), love looking at the pictures.

This book is nicely illustrated and easy to use. I think it will be very helpful in identifying different animals and plants in the Rocky Mountain regions.

This book worked perfectly for our trip. It was light weight and contained all the plant and animal info we were looking for.

Very good information. Great Book

Just moved out here to the Rocky Mountains and wanted to learn about what's out here in my backyard! Great book!

This product is exactly as advertised. This product showed up on time and as advertised. I would recommend this product.

small, light, durable, simple, arrived quickly, good price, that's all I can say but need 5 more words to submit..

Nothing warms a librarian's heart like a good reference book and this title fills the bill. Designed as field guide "see it / identify it" The opening section is a quick reference table organized by Mammals, Birds, Amphibians & Reptiles, Fish, Invertebrates, Trees, Shrubs and Herbs. Recognize it and have a reference to the page with a very detailed and well-illustrated description. There is a brief, but thorough Introduction explaining the biological life zones of the Rockies. A typical description provides the name including the Latin including the typical size in both in Imperial and Metric. Each feature has a 2" (approx.) full color illustration. The description provided is clear. For mammals, birds, fish and reptiles there are details on habit and behavior. For trees and herbs the description includes the height, needle/leaf length with information about flowers / fruit where relevant. The appendix details climate, seasons as well as a section on "parks and protected areas." By state or province it details the area by name, providing essentials as well as features in each. There is a map for each of these political entities. There is a very informative illustrated glossary. The references cited appear extensive and the index is very detailed. The title sized at 8 1/2" x 5 1/2" light and durable and printed on paper that has already resisted my coffee stains. I find comfort of knowing a little of what I am looking at and this

title should more than satisfy that need.
