Algebra And Trigonometry: Functions And Applications (Prentice Hall Classics)

Synopsis

In this text, algebra and trigonometry are presented as a study of special classes of functions. In the process, relationships between theory and real-world applications are thoroughly explored, bringing the material to life. Suitable for a second-year course, a trigonometry course, or a pre-calculus course.

Book Information

Hardcover: 1058 pages

Publisher: PRENTICE HALL; Classics ed. edition (May 15, 2005)

Language: English

ISBN-10: 0131657100

ISBN-13: 978-0131657106

Product Dimensions: 7.8 x 1.8 x 9.8 inches

Shipping Weight: 4.2 pounds

Average Customer Review: 4.2 out of 5 stars 41 customer reviews

Customer Reviews

My son's math teacher uses this textbook as he believes it is a better choice to inspire young minds to math. I have to agree, mainly because he teaches Math as an art the should be appreciated and discussed in fun, challenging, and inspired ways. Most mostly because my son is actively engaged and seems to struggle less when concepts and formulas are presented in readable, simple and straight forward ways!!Have purchase so another child will be toward math as fun, simple and something to share. It is sooo much more then just memorizing"

Love this classic Alg2/Trig textbook. I always recommend it (along w/Solutions Manual) to friends. Explanations are well-done, and the exercises are meaningful.

Very nice textbook that covers most of the topics for Algebra II. The problems are interesting and not too difficult. Much better than those newer textbooks.

Really good book, but too advanced for folks just starting out.

It is a good approach, although a bit dated. I use it for practice problems.

Awesome. Good explanation and related problems to challenge the student. Overall I would recommend it for the kids who are planning to participate in maths competition...

I bought the book to evaluate for a course next semester. The book arrived timely and was as described. In some places, its contents may be a bit more abstract than I expected, but my evaluation is not complete.

Who wouldn't love math!
