Customer Reviews

"Students used to have difficulties doing their online homework and lower grades overall when I used Aplia and Hurley for online tutoring. Students have been doing much better in terms of homework and grades since I began using Baronett's Logic, Third Edition, and especially Dashboard's gradual and structured quizzes and interactive exercises. Their grades are significantly higher."--David Gilboa, University of Wisconsin, Oshkosh

"I find the interactive proof exercises in Dashboard for Logic, Third Edition, essential for my online logic courses, and I do not know of any other system that provides anything comparable. Dashboard is the only software that really teaches proof construction."--Jeremy Byrd, Tarrant County College

"The key strength of Logic as a whole is Baronett's style and ability to speak to students. The explanations are clear, on point, and easy to grasp. This text puts logic within the reach of every student, and faculty will find it to be comprehensive and well organized. It is clearly superior to other texts on the market."--Nancy Slonneger-Hancock, Northern Kentucky University

"The examples and sample problems are

wonderful! They draw from sources that students may find familiar, such as popular culture, advertising, medicine, literature, politics, and even famous arguments in the history of philosophy."--Kevin DeLapp, Converse College"Logic is filled with wonderful and pertinent exercises with easily accessed answers, which are always accompanied by clever and comprehensible explanations. Its supplemental products are far and away the best I have seen in the field."--Lorraine Arangno, University of Colorado Colorado Springs"Logic contains a wealth of information, examples, and exercises from all walks of life, is flexible enough to support differing course needs, and has the comprehensiveness necessary for teachers and the relevance and excitement necessary to sustain students' interest. I find it far superior to Hurley in terms of its content, organization, and clarity of writing."--Joia Lewis Turner, Saint Paul College"The substantive explanations are very, very clear indeed, and are better in my view than those in Hurley. Logic covers all that I use in Hurley, is more accessible, has a better online package, and is cheaper. An exceptionally clear and accessible text that's perfect for an introductory logic course."--James Stacey Taylor, The College of New Jersey

Stan Baronett is the author of Logic, Second Edition.

Great price for a quality item. Fast shipping too!!!

quick and great

Clear writing. The topic is well-structured, visually-interesting.

This textbook is very good. The material is a bit tricky, but if you dedicate the time to understand it; you'll have no problem dealing with it later. Overall, the textbook is a good purchase to make!

I like the cover picture. Says everything.

i got this book today. everything should be fine... sorry for yesterday's email. the book is superior... and i love it very much , is almost like new although is sold as used book

Needed for philosophy

I have read several introductory logic books. This one is by far the most attractively laid out, with excellent use of graphics and color to turn what can be an exceedingly dull subject into a lively and engaging one. The author also stresses key fundamental concepts in deductive logic that are often glossed over by other authors. On the negative side, the book's treatment of so-called inductive logic is much more superficial, and sometimes lacks both depth and rigor. My suggestion for the author and publisher would be to rename the next edition of the book 'Deductive Logic' and address inductive logic in a separate book.
