## Customer Reviews

I was an astronomy geek back in the sixties and became a bona fide amateur astronomer by age 11. This book was my primary resource--and I did also have a small telescope (2" refractor), as well. I still am amazed at what I learned--and have retained--from this book. Btw, the reason I didn't purchase it from is because I already own it. Santa Claus brought it to me over forty years ago (as a companion to the telescope, which SC seemed to have purchased from Sears, guess the elves hadn't quite mastered optics). With that in mind, am sure parts of it are probably dated (Pluto for instance?), but how much can change, even in almost half century, in the celestial realm?
