Customer Reviews

"Introduces the reader to transport economics through applications of important concepts." Journal of Economic Literature "Essential reading for managers, policymakers, and those economists interested in the practical application of theoretical models." Abstracts of Public Administration, Development and the Environment

Stuart Cole is based at the University of Glamorgan in Wales. He has been director of Transport Research and Consultancy (TraC) since its creation in 1989. He also runs a private practice specializing in transport economics, policy, planning and marketing. He is also a frequent broadcaster on BBC radio and television and has written numerous articles and published several books on transport economics and policy.

I was very disappointed with this book, it essentially represents a number of anecdotal case studies in transport that are loosely held to illustrate the underlying theory. There is little exposition of the underlying theory, and the book is far weaker for it. Good text for high school students wanting a nice story - anyone more discerning than that should save their money.
